

Site Photographs

Figure 1.

The large area of hard standing that is used as a car compound

Figure 2.

The eutrophic pond or water body with concrete sides and base, situated in the southeast corner of the site. The thick layer of algae on its surface is clearly visible.

The solitary silver birch is at the far end of the pond (west side), and at the near side (east side) is the area of dense scrub.

Figure 3.

The hardstanding bordering the pond shown from the southern boundary.

Figure 4.

The vegetated margin or 'green corridor' along the southern boundary of the site.

Figure 5.

The green corridor and species present, which include teasels *Dipsacus fullonum* and bracken *Pteridium aquilinum*.

Figure 6.

The invasive species giant hogweed *Heracleum mantegazzianum*.
